Stock Market Challenge is an online simulation trading game where you create and manage your own portfolio and compete with other players in a risk-free environment.

Whether you're new to the stock markets or an experienced investor, this is a powerful tool for building skill, evaluating and tuning your strategy, and gaining important investing experience. Stock Market Challenge is free and easy to use.

Currently, there are no shares in your portfolio. To buy shares you need to use the 'Trade' box. In the textbox above where it says 'Select a scrip.' type at least the first three characters of the company name. On doing so, you will get a dropdown of company names starting with those three characters. Select one and click on 'Trade' button. On selecting the company you will see the Trade window where the Buy or Sell order has to be placed.

After placing the order you will see the status of the placed orders in 'Pending Orders' and once it gets confirmed from exchange prices it moves to 'Holding'. You may note that it takes about 10 minutes for even a market order to execute. Once your order gets executed the same will appear part of the Holdings table.
